With lighting a necessity in every building across the world, there are many who see it as an opportunity to add their own personal touch or personality to the building's lighting. Whether through the design, style or type of bulb, there are always new trends and developments to watch out for. With much of the year ahead, we've listed what we believe are the key trends to watch out for in 2020.

1. Increased efficiency

In recent years, there has been a renewed focus across multiple industries and society in general to be more environmentally aware and concentrate on more sustainable practices. Lighting is no exception. With the emergence of LED lights changing the market significantly, expect further developments in the efficiency of all light bulbs as they aim to catchup with the strides made by LED lights.

2. Retro styles

Many incandescent or 'Edison' bulbs are no longer popularly sold due to their use of interior filaments which made them highly energy inefficient. Despite this, they are expected to continue making a comeback in 2020 due to their much-loved design and use in family homes. While this will mainly be through bulbs with an interior filament, the same design is also available in an LED bulb, ensuring that it will be a highly sought-after design in 2020.

3. Price drops

With LED lights becoming the most popular lighting option on the market due to their energy efficiency, environmental benefits and the range of styles and designs available, it is expected that they will continue to dominate the market. It is expected that more and more different LED light bulbs will become available over 2020, helping to lower the price of purchasing bulbs.

4. Fixture changes

Structurally, LEDs are very different from standard bulbs. They are much smaller and adaptable, meaning that they don't typically need to be located on a ceiling. With more LEDs on the market, expect to see a reduction in the amount of lighting fixtures being sold and a greater number of accent and hidden lighting to be available.

C&D Electrical have a wealth of experience in sourcing the right lighting solution that adds ambience to your project but also meets your needs in relation to efficiency, sustainability and aesthetics.
